Furon® UPRP Precision Regulator

Pneumatically Actuated (1" Orifice)

Description

Furon UPRP Precision Pressure Regulators are engineered to control downstream fluid pressures with the utmost precision. A large sensing dome allows for a 1:1 ratio between the pilot air pressure and the desired output pressure. For example, setting the pilot air pressure to 40 psi will regulate the fluid output pressure to approximately 40 psi. Additionally, our unique diaphragm design assures that the regulators will not "chatter" at the lower end of the pressure range settings, a behavior common to many types of competing pressure regulators.

Wetted flow path is 100% PTFE and PFA and the regulator is 100% metal-free and elastomer-free, making the UPRP Pressure Regulators an ideal choice for Semiconductor applications, or any other application requiring high purity and/or superior chemical resistance.

Applications

- Precise regulation of pressures in aggressive or ultrapure chemical or DI water lines
- Protecting sensitive instrumentation from pressure spikes
- Preventing foreign particles from being forced through filtration membranes due to unstable pressures

Features and Benefits

- Precise, chatter-free control of downstream fluid pressure
- Handles fluid temperatures up to 194° F (90° C)
- All virgin PTFE/FluoroloyT® and PFA wetted flow path
- Non-metallic external surfaces
- Maximum Cv of 10.0
